

**ENSA (Grupo SEPI)**  
[www.ensa.es](http://www.ensa.es)

The passion for improvement has guided Ensa since the origins of its constitution. On 10th July 1973, the prologue to the great business history of Equipos Nucleares, S.A., S.M.E., began to be written in Maliaño (Cantabria). The Ensa Group of companies is close to celebrating half a century of life, with the pride and satisfaction of international recognition of our leadership, based on our high standards of Nuclear Safety, Quality and Reliability Culture.

The professionalism of our team, undoubtedly our main asset, has contributed both to the supply of large components and to the provision of services to nuclear power plants all over the world. Our track record, characterised by a discipline of continuous learning and improvement, supports us as a reference company for the Spanish nuclear industry in the integral cycle of the fuel management area, with our own licensed designs for spent fuel casks and fuel assembly racks, which we supply internationally.

Ensa has a strong commitment to ethics, integrity and equality. These principles are the signs of identity that define the honesty and responsible sustainability of the Group, and so they are stated in our Code of Conduct, guaranteeing the transparency of our business activity as a sign of respect for the trust of our external collaborators, customers and suppliers.

Each project and each successful delivery has forged Ensa's character as a multi-system manufacturer, always at the forefront of R+D+i through our Advanced Technology Centre (CTA). Our creative and innovative industrial profile encourages constant synergies in collaboration with both public and private organisations to develop lines of research into advances in innovation and digitalisation.

The proof of Ensa's technological development potential is our presence in the ITER project, in which we are participating in the construction and assembly of the largest designed tokamak, which will make it possible to use fusion as a large-scale energy source to generate electricity, without CO2 emissions. Precisely, respect for the environment is one of our maxims of corporate social responsibility, applied both in our products and services and in all processes, always taking into account new technical developments and society's expectations.

The satisfaction of our customers reaffirms the strong commitment to work and improvement of the entire team of professionals who, with their daily delivery, maintain the most demanding standards of our productivity. We are a great Group that will continue to advance and add successful chapters to new decades of our business history.
